

Programming Fundamentals — Student Assessment

C Programming • 1hr • 46 Marks

Names: _____

Dates: _____

Answer all questions clearly in the spaces provided. Read each question carefully before answering.

SECTION A — FILL IN THE BLANKS (6 MARKS)

1. A programming language is a set of _____ that tell a computer what to do.
2. A language that uses words like *print*, *if*, and *for* is called a _____ -level language.
3. High-level programming languages are easier for humans to _____ and _____.
4. The two main types of programming languages are low-level and _____.
5. IDE stands for _____.
6. A C compiler example is _____ or _____.

SECTION B — MULTIPLE CHOICE (7 MARKS)

1. Which one below is a programming language?
a) HTML b) C c) CSS d) XML
2. Which best describes a programming language?
a) Tool for circuits b) Human language c) Tells computer what to do d) Hardware setup
3. Which of the following is a low-level language?
a) Python b) Java c) Assembly d) C++
4. Which is closest to human language?
a) Machine b) Assembly c) High-level d) Binary
5. Programming in telecommunication helps mainly in:
a) Designing wires b) Creating signaling software c) Installing antennas d) None
6. Which is NOT a C programming IDE?
a) Code::Blocks b) Dev C++ c) MATLAB
7. What must be installed to run C programs?
a) C compiler b) HTML editor c) Database d) Network tool

SECTION C — TRUE / FALSE (8 MARKS)

1. Machine language uses binary numbers to communicate with a computer. (T / F)
2. Assembly language uses simple English-like words translated into machine code. (T / F)
3. Python and Java are examples of high-level programming languages. (T / F)
4. Low-level languages can run on all types of computers. (T / F)
5. The C language is commonly used to program small electronic devices. (T / F)
6. Programming languages have no role in digital communication. (T / F)
7. An IDE brings together code writing, compiling, and debugging tools. (T / F)
8. You can run a C program without installing a compiler. (T / F)

SECTION D — FLOWCHARTS & ALGORITHMS (15 MARKS)

- 1. Which step does NOT belong to the flowchart design process?
a) Identify the problem b) Draw the symbols c) Run the program d) Define inputs and outputs
- 2. Differentiate between the *process symbol* and the *decision symbol* in a flowchart (explain their shapes and uses):
.....

- 3. Fill in the meanings of these flowchart symbols:

Oval → _____

Parallelogram → _____

Diamond → _____

- 4. Draw a simple flowchart that accepts a student's marks and shows "PASS" if marks ≥ 50 , otherwise "FAIL." Explain how the decision symbol works in your flowchart:

- 5. Which of the following is NOT part of creating an algorithm?
a) Define the problem b) Connect to the Internet d) Test and improve

- 6. Complete the missing step in this algorithm:

Step 1: Start → Step 2: Input two numbers → Step 3: Add the numbers → Step 4: _____ → Step 5: Stop

SECTION E — UNDERSTANDING IDE AND KEY TERMS (10 MARKS)

1. List down any **four typical features** found in an Integrated Development Environment (IDE):

2. Differentiate the following terms clearly:

Program:

Programming:

Computer:
